Application

Profit 5RM[®]

Smart-Client[®]

Solution Architecture

The Challenges

Data not centralized, Not enough bandwidth between branches and head office due to weak connections, transfer of data from branches to the head office, providing online information to customers of their shipment

The Solution

- Centralization of database
- Smart – client deployment
- Accessibility of data at all locations in less time and cost
- Data accessible at all locations through central server using broadband and dial – up links
